

# Files Description

## Preliminary Screen 1.jpg

**Description:** This file is a screenshot capturing the initial user interface (UI) appearance before the XML template file is loaded. It serves as a visual reference to illustrate the starting point of the application.

## Template\_no WP.xml

**Description:** This XML file, named "Template\_no WP.xml," is a critical component of the XML Editor application. It serves as the template upon which edits are made. Users input specific data into this file to create customized XML documents.

## with waiver screen.jpg

**Description:** This file contains a screenshot of the UI featuring the interface elements used to make edits to the XML template file. It provides a visual representation of where users can input and modify data, enhancing the understanding of the editing process.

## XML Editor\_2.1.exe

**Description:** "XML Editor\_2.1.exe" is the executable file that allows users to access and interact with the XML Editor application. Running this file opens the user-friendly interface, simplifying the process of editing XML templates and saving customized versions.

## XML Editor\_Both.ipynb

**Description:** "XML Editor\_Both.ipynb" is the Python code file responsible for the creation of the executable (XML Editor\_2.1.exe). It contains the code logic and instructions necessary for the XML Editor's functionality. This Python script forms the backbone of the application, enabling users to customize XML files with ease.
